

C.A 6165

Appliance multitester

About the user's manual

- > This Instruction manual contains detailed information on the C.A 6165, its key features, functionalities and use.
- It is intended for technically qualified personnel responsible for the product and its use.
 Please note that LCD screenshots in this document may differ from the actual instrument screens in details due to firmware variations and modifications.

1.1 Warnings and notes

1.1.1 Safety warnings

In order to reach high level of operator safety while carrying out various measurements using the C.A 6165 instrument, as well as to keep the test equipment undamaged, it is necessary to consider the following general warnings:

- Read this Instruction manual carefully, otherwise use of the instrument may be dangerous for the operator, for the instrument or for the equipment under test!
- · Consider warning markings on the instrument!
- If the test equipment is used in manner not specified in this Instruction manual the protection provided by the equipment may be impaired!
- > Do not use the instrument and accessories if any damage is noticed!
- Regularly check the instrument and accessories for correct functioning to avoid hazard that could occur from misleading results.
- Consider all generally known precautions in order to avoid risk of electric shock while dealing with hazardous voltages!
- Use only standard or optional test accessories supplied by your distributor!
- Only test adapters provided or approved by Chauvin Arnoux should be connected to TC1 (test and communication) connectors.
- Use only earthed mains outlets to supply the instrument!
- In case a fuse has blown refer to chapter 8.2 Fuses in this Instruction manual to replace it!
- Instrument servicing and calibration is allowed to be carried out only by a competent authorized person!
- Chauvin Arnoux is not responsible for the content of the user-programmed Auto Sequences®!

1.1.2 Warnings related to safety of measurement functions

1.1.2.1 HV AC, HV DC, HV AC programmable, HV DC programmable

- A dangerous voltage up to 5 kV_{AC} or 6 kV_{DC} is applied to the HV instrument outputs during the test. Therefore special safety consideration must be taken when performing this test!
- Only a skilled person familiar with hazardous voltages can perform this measurement!
- > DO NOT perform this test if any damage or abnormality (test leads, instrument) is noted!
- Never touch exposed probe tip, connections equipment under test or any other energized part during the measurements. Make sure that NOBODY can contact them either!

- DO NOT touch any part of test probe in front of the barrier (keep your fingers behind the finger guards on the probe) possible danger of electric shock!
- It is a good practice to use lowest possible trip-out current.

1.1.2.2 Diff. Leakage, Ipe Leakage, Touch Leakage, Power, Leak's & Power

Load currents higher than 10 A can result in high temperatures of fuse holders and On/Off switch! It is advisable not to run tested devices with load currents above 10 A for more than 15 minutes. Recovery period for cooling is required before proceeding with tests! Maximum intermittent duty cycle for measurements with load currents higher than 10 A is 50 %.

1.1.2.3 Insulation resistance

Do not touch the test object during the measurement or before it is fully discharged! Risk of electric shock!

1.1.3 Markings on the instrument

. 🛕

Read the Instruction manual with special care to safety operation«. The symbol requires an action!

Dangerous high voltage is present on terminals during the test. Consider all precautions in order to avoid risk of electric shock.

C Mark on your equipment certifies that it meets European Union requirements for EMC, LVD, and ROHS regulations.

This equipment should be recycled as electronic waste.

1.2 Standards applied

The C.A 6165 instrument is manufactured and tested according to the following regulations, listed below.

Electromagnetic compatibility (EMC)

IEC 61326-1	Electrical equipment for measurement, control and laboratory use - EMC requirements – Part 1: General requirements Class B (Portable equipment used in controlled EM environments)
Safety (LVD)	
IEC 61010-1	Safety requirements for electrical equipment for measurement, control, and laboratory use – Part 1: General requirements
IEC 61010-2-030	Safety requirements for electrical equipment for measurement, control and laboratory use – Part 2-030: Particular requirements for testing and measuring circuits
IEC 61010-031	Safety requirements for electrical equipment for measurement, control and laboratory use – Part 031: Safety requirements for hand-held probe assemblies for electrical measurement and test
IEC 61557	Electrical safety in low voltage distribution systems up to 1 000 V a.c. and 1 500 V d.c. – Equipment for testing, measuring or monitoring of protective measures Instrument complies with all relevant parts of IEC 61557 standards.

Functionality

IEC 60335	Household and similar electrical appliances
IEC 60950	Information technology equipment – Safety
IEC 61439	Low-voltage switchgear and controlgear assemblies
IEC 61010	Safety requirements for electrical equipment for measurement, control, and laboratory use
IEC 60598	Safety of lighting equipment
VDE 0701-702	Inspection after repair, modification of electrical appliances – Periodic inspection on electrical appliances
	General requirements for electrical safety
IEC 50191	Erection and operation of electrical test equipment

2 Instrument set and accessories

2.1 Standard set of the instrument

- Instrument C.A 6165
- Bag for accessories
- HV test probes 2 m, 2 pcs
- Continuity test lead set 2.5 m, 2 pcs
- Continuity test lead red 1.5 m / 2.5 mm²
- Test lead black 2.5 m
- Test lead red 2.5 m
- Alligator clips black 2 pcs
- Alligator clips red 3 pcs
- Mains cable (2 m, wire cross-section 3 x 1.5 mm²)
- RS232 cable
- USB cable
- Calibration Certificate
- Short form instruction manual
- CD with instruction manual (full version) and PC SW MT Link

2.2 Optional accessories

See the attached sheet for a list of optional accessories that are available on request from your distributor.

3.1 Front panel

	21	MicroSD card slot

The C.A 6165 can be manipulated via a keypad or touch screen.

4.1 General meaning of keys

4.2 General meaning of touch gestures:

J.	Tap (briefly touch surface with fingertip) is used to: - select appropriate option - confirm selected option - start and stop measurements
Jew)	Swipe (press, move, lift) up/ down is used to: - scroll content in same level - navigate between views in same level
	Long press (touch surface with fingertip for at least 1 s) is used to: - select additional keys (virtual keyboard) - enter cross selector from single test screens
J €	 Tap Escape icon is used to: return to previous menu without changes abort measurements

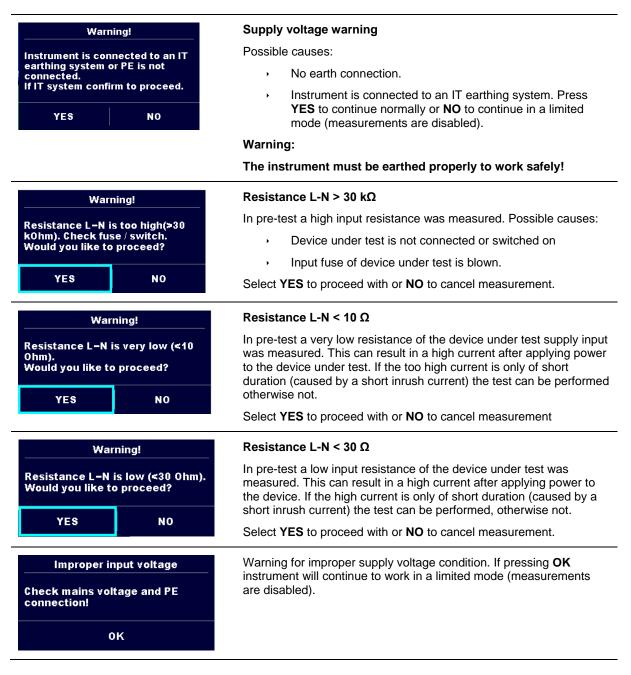

4.3 Safety checks

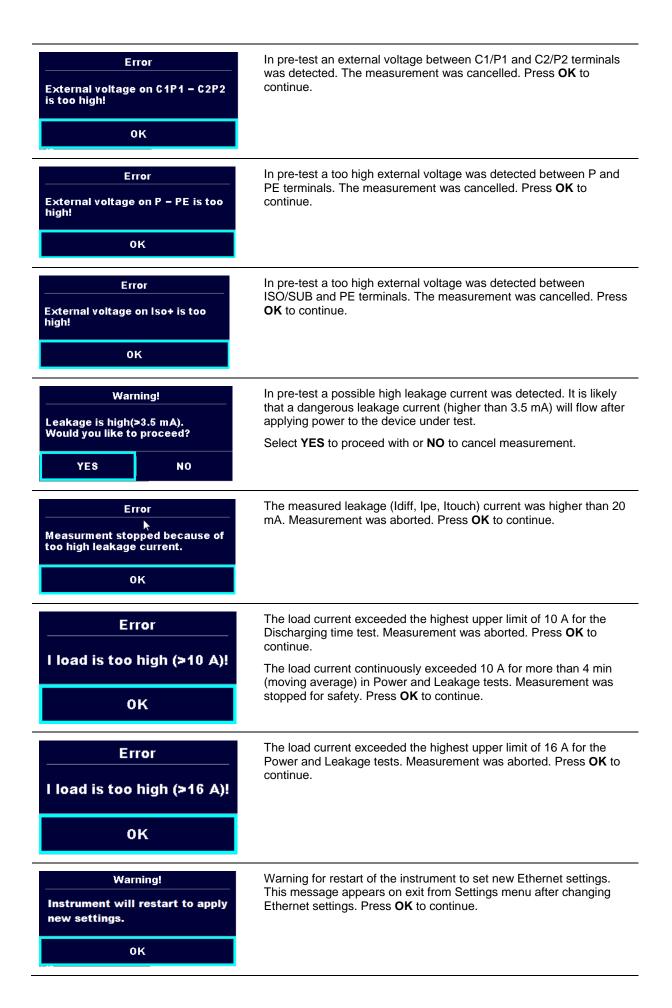

At start up and during operation the instrument performs various safety checks to ensure safety and to prevent any damage. These safety pre-tests are checking for:

- Correct input mains voltage
- Presence of input PE connection,
- Any external voltage against earth on mains test socket
- Excessive leakage currents through measuring I/Os,
- Too low resistance between L and N of tested device,
- · Proper operation of safety relevant internal electronic circuits

If a safety check fails, an appropriate warning message will be displayed and safety measures will be taken. The warnings and safety measures are described in chapter 4.4 Symbols and messages.

4.4 Symbols and messages

The instrument is overheated. The measurement can't be carried out until the icon disappears. Press OK to continue.
The device under test should be switched on (to ensure that the complete circuit is tested).
Test voltage in Insulation resistance measurement is too low.
Measurement result is scaled to 110 V.
Red dot indicates phase of measurement where higher leakage was measured. Applicable only if phase reversal is enabled during the measurement.
Test leads resistance in Continuity P/S - PE measurement is not compensated.
Test leads resistance in Continuity P/S - PE measurement is compensated.
Warning!
A high voltage is / will be present on the instrument output! (Withstanding test voltage, Insulation test voltage, or mains voltage).
Warning!
A very high and dangerous voltage is / will be present on the instrument output! (Withstanding test voltage).
Test passed.
Test failed.
Conditions on the input terminals allow starting the measurement; consider other displayed warnings and messages.
Conditions on the input terminals do not allow starting the measurement, consider displayed warnings and messages.
Proceeds to next measurement step
Stop the measurement.

4.6.5 Auto Sequence[®] groups

Refer to Chapter 4.9 Auto Sequence® groups for more information.

4.6.6 User accounts

In this menu user accounts can be managed:

- Setting if signing in to work with the instrument is required or not.
- Adding and deleting new users, setting their user names and passwords.
- The demand to sign in can prevent from unauthorized persons to work with the instrument.

If a user account is set and the user is signed in, the user's name will be stored in memory for each measurement.

The user accounts can be managed by the administrator. User account pasword consists of an up to 4 digit number. Individual users can change their passwords.

The administrator password consists of an up to 15 characters. Factory set administrator password is ADMIN. If the password is forgotten the second administrator password can be used. This password always unlocks the Account manager and is delivered with the instrument.

4.6.6.1 Signing in

By selecting User Accounts icon in Settings menu, Sign in menu appear on the screen. Same screen appear when instrument is switched on, if Sign in is set to required, see Chapter *4.6.6.3 Managing accounts* for details.

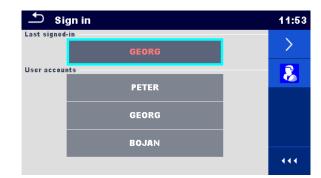

Figure 4.5: Sign in menu

Options

User signing in: Last signed-in Last signed in user is highlighted and displayed in the first row. Another user can be selected from the User accounts list. User accounts PETER GEORG BOJAN Enters User password entry screen. Enter the User password through the on-screen numerical 12:29 keyboard and confirm Password User profile screen is opened as presented on Figure 4.6. 1234 1 2 3 5 6 7 8 9 0

Administrator signing in:

Enters Account manager password entry screen.

4.6.7 Change password for HV functions

In this menu the password to enable starting of HV functions can be set, changed or disabled.

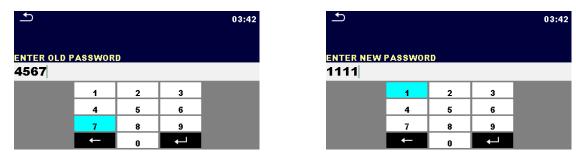

Figure 4.9: Change password menu

Notes:

- Default password is 0000.
- An empty entry disables the password.
- If password is lost, entry 4648 resets password to default.

4.6.8 Settings

In this menu different general parameters can be set.

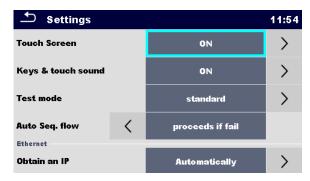

Figure 4.10: Settings menu

Setting options:

Option	Description
Touch screen	ON – touch screen is active. OFF – touch screen is deactivated.
Keys & touch sound	ON – sound is active. OFF – sound is deactivated.
Test mode	Standard – Visual and Functional inspection status fields should be set manually. Expert – All Visual and Functional inspection status fields are filled automatically with PASS status.
Auto Seq. flow	 Ends if fail – Auto Sequence will end after first fail status of measurement / inspection is detected. Proceeding tests will be skipped. Proceeds if fail – Auto Sequence will proceed even if fail status of measurement / inspection is detected.

Ethernet setting options:

	Available selection	Description
Obtain an IP	[AUTOMATICALLY, MANUAL]	When the manual mode is chosen, the user must provide the correct network settings. Otherwise the instrument is automatically assigned an IP address fron the local network using the DHCP protocol.
IP address	XXX.XXX.XXX.XXX	Displays the instrument's IP address. In manual mode, the user should enter the correct value.
Port number	0 – 65535	Selects the port number on which the instrument listens for incoming connections. The instrument communicates using UDP/IP protocol. Max. UDP packe length is 1024 bytes.
Subnet mask	XXX.XXX.XXX.XXX	In manual mode, the user should enter the correct value.
Default gateway	XXX.XXX.XXX.XXX	In manual mode, depending on the network topology, the use can enter the correct value or leave it as it is, if not needed.
Preferred DNS server	XXX.XXX.XXX.XXX	In manual mode, depending on the network topology, the use can enter the correct value or leave it as it is, if not needed.
Alternate DNS server	XXX.XXX.XXX.XXX	In manual mode, depending on the network topology, the use can enter the correct value or leave it as it is, if not needed.
Host name	CA6165_XXXXXXXX	Displays the instrument's unique name on the local network. The host name consists of the instrument's name and its serial number.
MAC address	XX:XX:XX:XX:XX:XX	Displays the instrument's MAC address. User can change the address in case of another device on the

4.6.9 Devices

Figure 4.13: Instrument info screen

4.7 Instrument profiles

In this menu the instrument profile can be selected from the available ones.

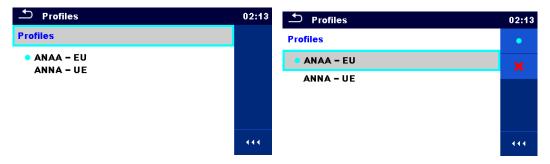

Figure 4.14: Instrument profile menu

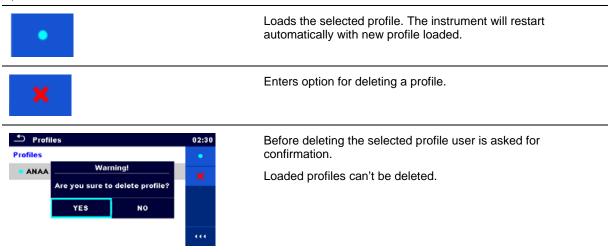

The instrument uses different specific system and measuring settings in regard to the scope of work or country it is used. These specific settings are stored in instrument profiles.

By default each instrument has at least one profile activated. Proper licence keys must be obtained to add more profiles to the instruments.

If different profiles are available they can be selected in this menu.

Refer to Appendix B - Profile Notes for more information about functions specified by profiles.

Options

4.8 Workspace Manager

The Workspace Manager is intended to manage with different Workspaces and Exports stored on the microSD card.

4.8.1 Workspaces and Exports

The works with C.A 6165 can be organized with help of Workspaces and Exports. Exports and Workspaces contain all relevant data (measurements, parameters, limits, structure objects) of an individual work.

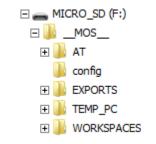

Figure 4.15: Organization of Workspaces and Exports on microSD card

Workspaces are stored on microSD card on directory WORKSPACES, while Exports are stored on directory EXPORTS. Exports are suitable for making backups of important works or can be used for storage of works if the removable microSD card is used as a mass storage device. To work on the instrument an Export should be imported first from the list of Exports and converted to a Workspace. To be stored as Export data a Workspace should be exported first from the list of Workspaces and converted to an Export.

4.8.2 Workspace Manager main menu

In Workspace manager Workspaces and Exports are displayed in two separated lists.

🗢 Workspace Manager	00:02	Subscription Service Manager	06:19
WORKSPACES:	∎⇔●	EXPORTS:	∎⇔●

Note: If a Workspace with the same name already exists the name of the imported Workspace will be changed (name_001, name_002, name_003,).

4.8.2.7 Exporting a Workspace

4.9 Auto Sequence® groups

The Auto Sequences[®] in C.A 6165 are organized in Auto Sequence[®] groups stored in folders on the microSD memory card. Folders are located in *Root_MOS_VAT* on the microSD card.

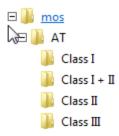

Figure 4.19: Organization of Auto Sequence® groups on microSD card

Each group contain similar Auto Sequences[®]. The Auto Sequence[®] groups menu is intended to manage with different Auto Sequences[®].

4.9.1 Auto Sequence[®] groups menu

Auto Sequence[®] groups menu can be accessed from General settings menu followed by selection of Auto Sequence[®] groups menu.

Another option to access it is from Main Auto Sequences[®] menu, see chapter 7.1 Selection of Auto Sequences[®]. In this menu lists of Auto Sequence[®] groups are displayed. Only one group can be active in the instrument at the same time. The group selected from the Auto Sequence[®] groups menu will be opened whenever Auto Sequence[®] menu is selected from the instrument Main menu, see chapter 4.5 Instrument main menu.

🛨 Auto Sequence® groups	14:04

3	 Auto Sequence® groups CLASS I CLASS III 	14:06	A group of Auto Sequences [®] is deleted. Note: Selected Auto Sequences [®] group (marked with blue dot) cannot be deleted, warning message appear on the screen.

5 Memory Organizer

Memory Organizer is a tool for storing and working with test data.

5.1 Memory Organizer menu

The data is organized in a tree structure with Structure objects and Measurements. C.A 6165 has a fixed three level structure. The hierarchy of Structure objects in the tree is shown on *Figure 5.1*.

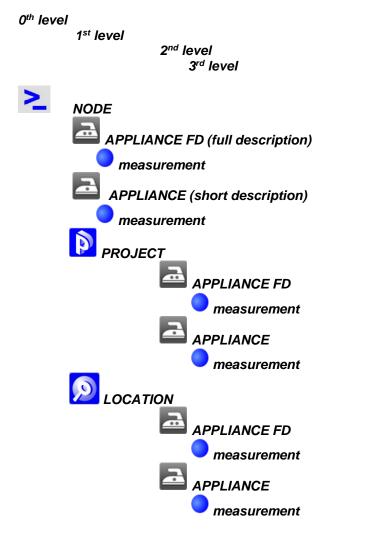

Figure 5.1: Tree structure and its hierarchy

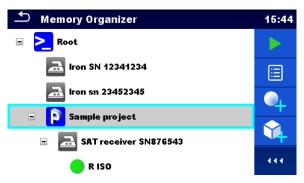

Figure 5.2: Example of a Tree menu

5.1.1 Measurement statuses

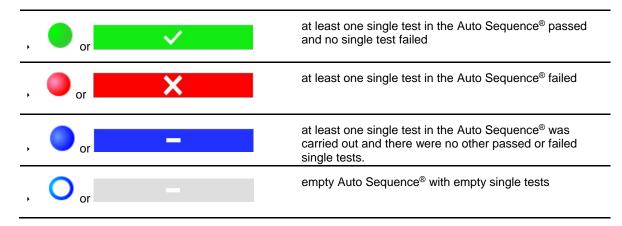

Each measurement has:

- a status (Pass or Fail or no status)
- a name
- results
- limits and parameters

A measurement can be a Single test or an Auto Sequence® test. Statuses of single tests:

passed finished single test with test results
failed finished single test with test results
finished single test with test results and no status
empty single test without test results

Overall statuses of Auto Sequence® tests:

5.1.2 Structure Objects

Each Structure object has:

- an icon
- a name
- parameters
- Optionally they can have:

an indication of the status of the measurements under the Structure object

a comment or a file attached

Structure objects supported in C.A 6165 are described in Appendix A - Structure objects in C.A 6165.

Figure 5.3: Structure object in tree menu

5.1.2.1 Measurement status indication under the Structure object

Overall status of measurements under each structure element / sub-element can be seen without spreading tree menu. This feature is useful for quick evaluation of test status and as guidance for measurements.

Options

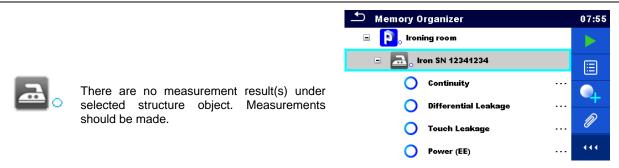

Figure 5.4: Example of status - No measurement result(s)

One or more measurement result(s) under selected structure object has failed. Not all measurements under selected structure object have been made yet.

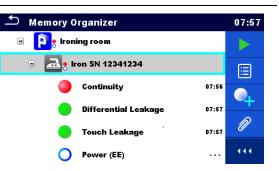

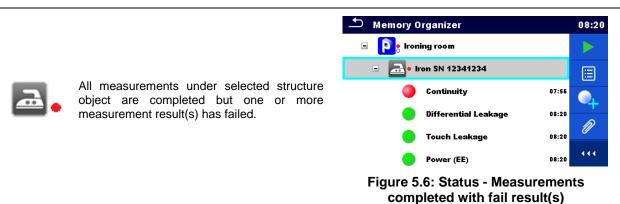

Figure 5.5: Example of status - Measurement not completed with fail result(s)

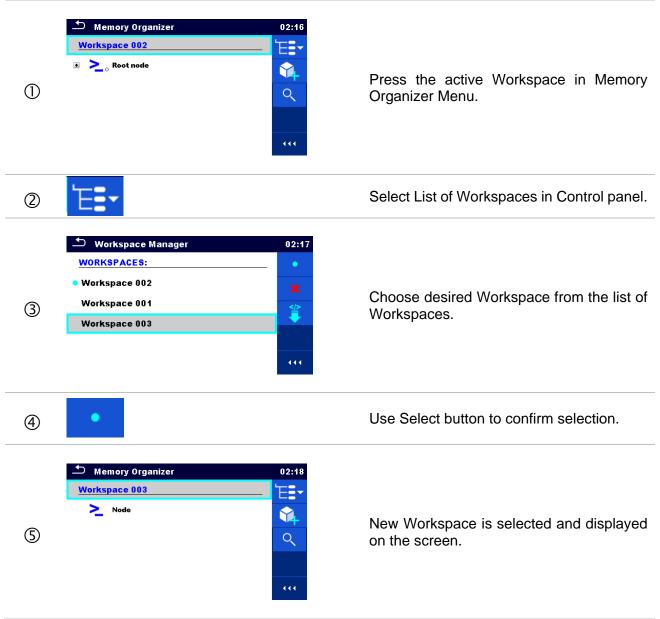

Note:

There is no status indication if all measurement results under each structure element / sub-element have passed or if there is an empty structure element / sub-element (without measurements).

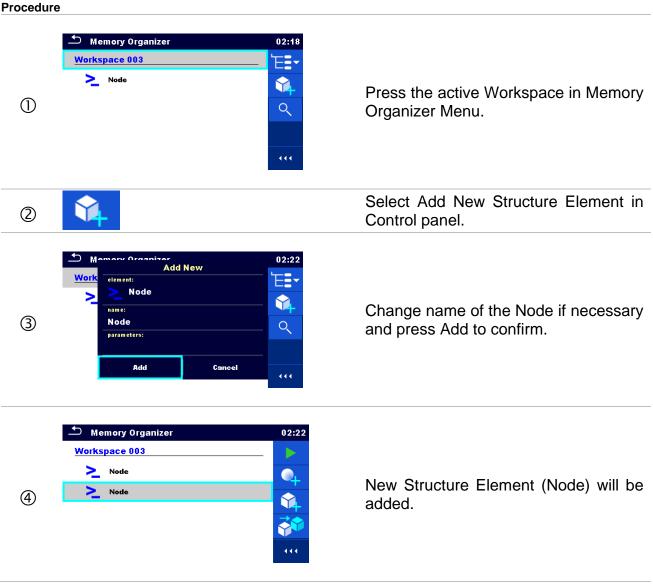

5.1.3 Selecting an active Workspace in Memory Organizer

Memory Organizer and Workspace Manager are interconnected so an active Workspace can be selected also in the Memory Organizer menu.

5.1.4 Adding Nodes in Memory Organizer

Structural Elements (Nodes) are used to ease organization of data in the Memory Organizer. One Node is a must; others are optional and can be created or deleted freely.

5.1.5 Operations in Tree menu

In the Memory organizer different actions can be taken with help of the control panel at the right side of the display. Possible actions depend on the selected element in the organizer.

Operations on measurements (finished or empty measurements) 5.1.5.1

The measurement must be selected first. Operation options can be selected from the menu on the right side of the screen. Menu options are adapted to measurement status, empty, finished, finished and saved, as presented on Figure 5.7.

6.1.1.3 Single test screen during test

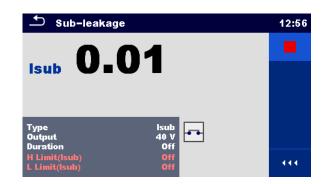

Figure 6.4: Single test screen (during measurement)

Options (during test)

	Stops the single test measurement.
	Proceeds to the next step of the measurement (if measurement consists of more steps).
Ţ	Aborts measurements.

6.1.1.4 Single test result screen

Figure 6.5: Single test result screen

Options (after measurement	is	finished)
----------------------------	----	-----------

- A new measurement was selected and started from a Structure object in the structure tree:
 - The measurement will be saved under the selected Structure object.

A new measurement was started from the Single test main menu:

Saving under the last selected Structure object will be offered by default. The user can <u>select another Structure object or create a new Structure object</u>. By pressing

_

the key in Memory organizer menu the measurement is saved under selected location.

An empty measurement was selected in structure tree and started:

- The result(s) will be added to the measurement. The measurement will change its status from 'empty' to 'finished'.

An already carried out measurement was selected in structure tree, viewed and then restarted:

- A new measurement will be saved under the selected Structure object.

	Adds comment to the measurement. The instrument opens keypad for entering a comment.		
?	Opens help screens. Refer to chapter 6.1.3 Help screens for more information.		
	Opens screen for changing parameters and limits. Refer to chapter <i>6.1.1.2 Setting parameters and limits of single</i> <i>tests</i> for more information.		
Duration H Limit(Idiff) L Limit(Idiff)	Off Off Off		

6.1.1.5 Single test memory screen

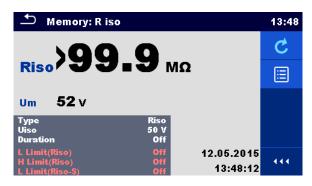

Figure 6.6: Single test memory screen

Options

C	Retest Enters screen with "empty" measurement.
	Opens menu for viewing parameters and limits.
	Refer to chapter 6.1.1.2 Setting parameters and limits of single tests for more information.

6.1.2 Single test (inspection) screens

Visual and Functional inspections can be treated as a special class of tests. Items to be visually or functionally checked are displayed. In addition on-line statuses and other information are displayed.

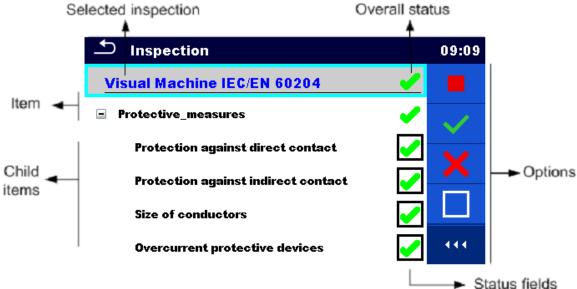

Figure 6.7: Inspection screen organisation

6.1.2.1 Single test (inspection) start screen

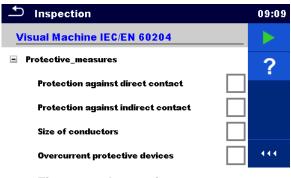

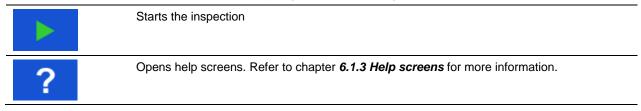

Figure 6.8: Inspection start screen

Options (inspection screen was opened in Memory organizer or from Single test main menu)

6.1.2.2 Single test (Inspection) screen during test

Options (during test)

Visual Machine IEC/EN 60204	Selects item
Protective_measures	
Size of conductors	
	Applies a pass status to the selected item or group of items.
×	Applies a fail status to the selected item or group of items.
	Clears status in selected item or group of items
•	Applies a checked status to the selected item or group of items.
n D	A status can be applied direct to the checkbox; successive tap toggle between statuses.
Р	Power is applied to the mains test socket to power up the tested equipment during a functional inspection. The instrument displays the Power measurement screen, refer to <i>Chapter 6.2.12 Power for details</i> .
	Stop the inspection. Enters result screen if all items are checked.
1	Goes to the result screen, if inspection test running. Goes to the previous menu, if inspection test was stopped before.

Rules for automatic applying of statuses:

> The parent item(s) can automatically get a status on base of statuses in child items.

- the fail status has highest priority. A fail status for any item will result in a fail status in all parent items and an overall fail result.
- if there is no fail status in child items the parent item will get a status only if all child items have a status.
- Pass status has priority over checked status.
- The child item(s) will automatically get a status on base of status in the parent item
 All child items will get the same status as applied to the parent item.

Note

 Inspections and even inspection items inside one inspection can have different status types. For example some basic inspections don't have the 'checked' status.

6.1.2.3 Single test (Inspection) result screen

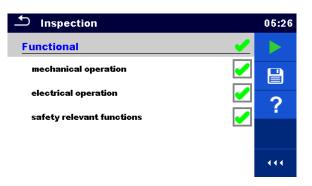

Figure 6.10: Inspection result screen

Options (after inspection is finished)

	Starts a new inspection.
	 Saves the result. A new inspection was selected and started from a Structure object in the structure tree: The inspection will be saved under the selected Structure object. A new inspection was started from the Single test main menu: Saving under the last selected Structure object will be offered by default. The user can select another Structure object or create a new Structure object. By pressing the key in Memory organizer menu the inspection is saved under selected location. An empty inspection was selected in structure tree and started: The result(s) will be added to the inspection. The inspection will change its status from 'empty' to 'finished'. An already carried out inspection was selected in structure tree, viewed and then restarted: A new measurement will be saved under the selected Structure object.
?	Opens Help screen, see chapter 6.1.3 Help screens for more information.

6.1.2.4 Single test (inspection) memory screen

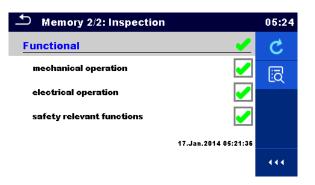

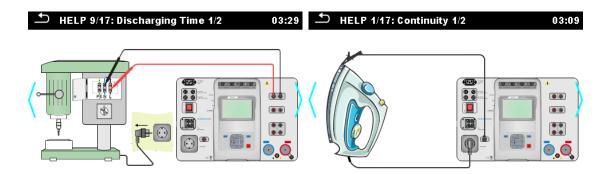

Figure 6.11: Inspection memory screen

Options	
C	Retest Starts inspection with cleared statuses.
iq	Enters view mode.

6.1.3 Help screens

Help screens contain diagrams for proper connection of the instrument.

Options

on

Goes to previous / next help screen.

6.2 Single test measurements

6.2.1 Visual inspections

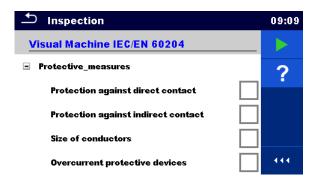

Figure 6.13: Visual inspection menu

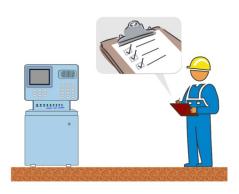

Figure 6.14: Visual inspection test circuit

Visual inspection procedure

- Select the appropriate Visual inspection.
- Start the inspection.
- Perform the visual inspection of the appliance / equipment.
- Apply appropriate ticker(s) to items of inspection.
- End inspection.
- Save results (optional).

Figure 6.19: Examples of Continuity measurement results

6.2.2.1 Compensation of test leads resistance

This chapter describes how to compensate the test leads resistance in **Continuity (Output = P/S - PE)** function. Compensation can be carried out to eliminate the influence of test leads resistance and the internal resistances of the instrument on the measured resistance.

Connection for compensating the resistance of test leads

Figure 6.20: Shorted test leads

Compensation of test leads resistance procedure

- Select the **Continuity** function. Parameter Output must be set to P/S PE.
- Connect test leads to the instrument and short the test leads together, see Figure 6.20.
- Touch the key to compensate leads resistance.
- Symbol is displayed if the compensation was carried out successfully.

Figure 6.21: Uncompensated and compensated result

Note:

The compensation of test leads is carried out with set test current (I out).

6.2.3 HV AC

Refer to chapter 1.1 Warnings and notes for more information regarding safe use of the instrument.

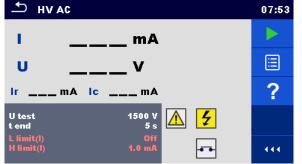

Figure 6.22: HV AC test menu

Test results / sub-results

I test current
U measured a.c. test voltage
Ir resistive portion of test current

Test parameters

AC test voltage	U test [100 V 5000 V in steps of 10 V]
Duration	t end [Off, 1 s 120 s]

Test limits

High limit (I)	H limit [0.5 mA 100 mA]
Low limit (I)	L limit [Off, 0.5 mA 100 mA]

Test circuit

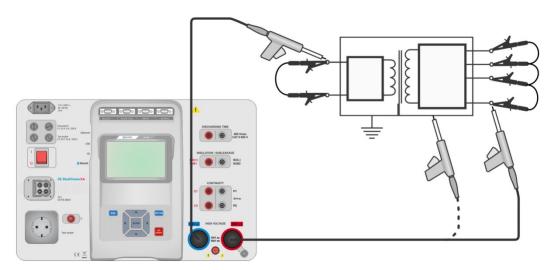

Figure 6.23: HV AC measurement

HV AC measurement procedure

- Select the HV AC function.
- Set test parameters / limits.
- Connect HV test leads to HV(~,+) and HV(~,-) terminals on the instrument.
- Connect HV test leads to device under test.
- Start measurement.
- Measurement can be stopped manually or by timer.
- Save results (optional).

Figure 6.24: Examples of HV AC meaasurement results

Note:

•

First HV measurement after power on the instrument (if password protection is enabled) or first HV measurement after enabling or changing password require entering password for enabling HV test. Refer to chapter 4.6.7 Change password for HV functions for more information.

6.2.4 HV DC

IMPORTANT SAFETY NOTE

Refer to chapter 1.1 Warnings and notes for more information regarding safe use of the instrument.

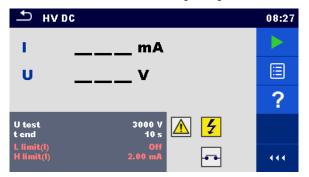

Figure 6.25: HV DC test menu

Test results / sub-results

U..... measured test voltage I..... test current

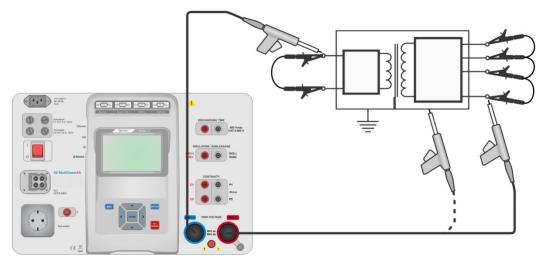

Test parameters

DC test voltage	U test [500 V 6000 V in steps of 50 V]

Low limit (I)	L limit [Off, 0.05 mA 10.0 mA]

Test circuit

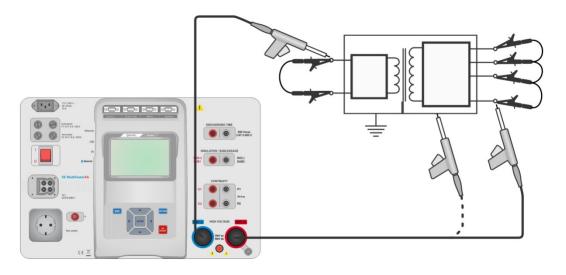

Figure 6.33: HV DC programmable test

HV DC programmable test procedure

- Select the HV DC programmable function.
- Set test parameters / limits.
- Connect HV test leads to HV(~,+) and HV(~,-) terminals on the instrument.
- Connect HV test leads to device under test.
- Start measurement.
- Measurement can be stopped manually or by timer.
- Save results (optional).

Figure 6.34: Examples of HV DC programmable test results

Note:

•

First HV measurement after power on the instrument (if password protection is enabled) or first HV measurement after enabling or changing password require entering password for enabling HV test. Refer to chapter 4.6.7 Change password for HV functions for more information.

6.2.7 Insulation resistance (Riso, Riso-S)

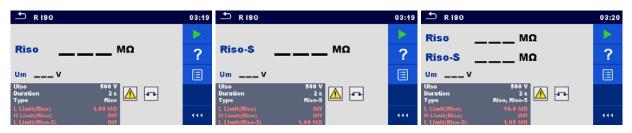

Figure 6.35: Insulation resistance test menus

Test results / sub-results

Riso..... Insulation resistance Riso-S Insulation resistance-S Um...... Test voltage

Test parameters

Nominal test voltage	Uiso [50 V, 100 V, 250 V, 500 V, 1000 V]
Duration	Duration [Off, 2 s 180 s]
Type of test	Type [Riso, Riso-S, (Riso, Riso-S)]
Output connections (Riso)	[ISO(+), ISO(-), Socket LN-PE, Socket LN-P/S]
Output connections (Riso-S)	[Socket LN-P/S]

Test limits

H Limit (Riso)	Η limit [Off, 0.10 MΩ 10.0 MΩ]
L Limit (Riso)	L limit [Off, 0.10 MΩ 10.0 MΩ]
H Limit (Riso-S)	H limit [Off, 0.10 MΩ 10.0 MΩ]
L Limit (Riso-S)	L limit [Off, 0.10 MΩ 10.0 MΩ]

Test circuits

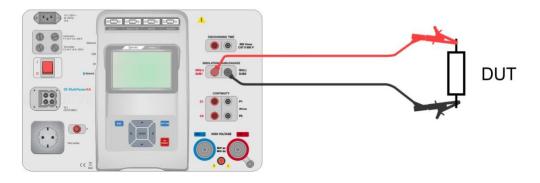

Figure 6.36: Measurement of insulation resistance (ISO(+), ISO(-))

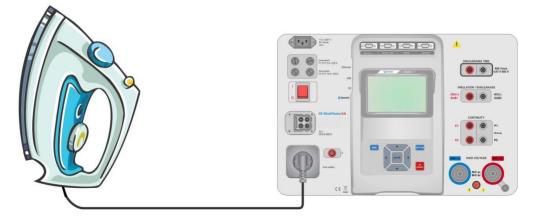

Figure 6.37: Measurement of insulation resistance (Socket LN - PE)

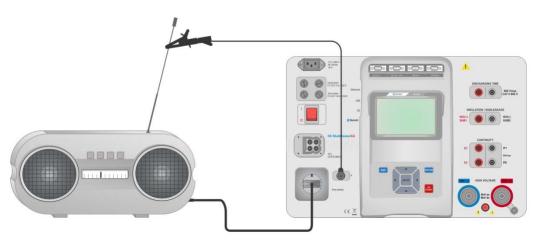

Figure 6.38: Measurement of Riso, Riso-S (socket)

RISO measurement procedure

- Select the Riso function.
- Set test parameters / limits.
- Connect test leads to ISO(+), ISO(-) terminals on the instrument, then connect test leads to device under test, or
- Connect device to mains test socket. For Riso-S test, additionally connect test lead to P/S terminal on instrument, and then connect test lead to device.
- Start measurement.
- Measurement can be stopped manually or by timer.
- Save results (optional).

Figure 6.39: Examples of Insulation resistance measurement results

Note:

When P/S probe is connected during the Riso measurement, then the current through it is also considered.

6.2.8 Sub-leakage (Isub, Isub-S)

Figure 6.40: Sub Leakage test menus

Test results / sub-results

Isub Sub-leakage current Isub-S...... Sub-leakage current-S

Test parameters

Test limits

Discharging time limit	Limit(t) [1 s. 5 s]	
Discharging time limit		

Measuring principle (Output = External)

The measuring principle of the Discharging time function is as following:

Phase 🛈	The device under test is connected to supply voltage via an external socket. The instrument monitors the voltage (on supply or internal connections) and internally stores the peak voltage value.
Phase 2	The device under test is disconnected from the supply and the voltage at the test terminals starts to fall. Once the rms voltage falls for 10 V the instrument starts the timer.
Phase ③	After the voltage drops below an internally calculated voltage value the timer is stopped. The instrument re-calculates the measured time to a value as it would be if the disconnection occurred at the maximum voltage value.

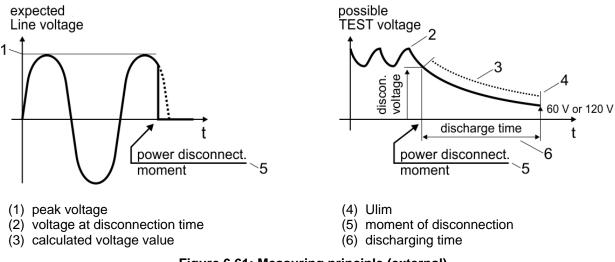

Figure 6.61: Measuring principle (external)

Test circuit (Output = External)

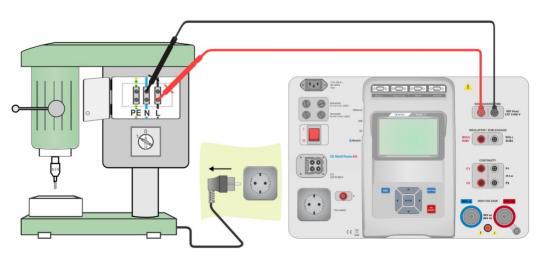

Figure 6.62: Discharging Time test (Output = External)

Discharging Time test procedure (Output = External)

- Select the **Discharging Time** function.
- Set test parameters / limits.
- · Connect test leads to the DISCHARGING TIME terminals on the instrument and on the device under test.
- · Connect device under test to the mains supply and Switch it ON.
- Start measurement.
- · Measurement is stopped manually by disconnecting device under test mains supply.
- Save results (optional).

Figure 6.63: Examples of Discharging Time measurement results (Output = External)

Measuring principle (Output = Socket)

The measuring principle of the Discharging time function is as following:

- **Phase** The DEVICE UNDER TEST is connected to the mains test socket. The instrument monitors the mains voltage and internally stores the peak voltage value.
- **Phase** The instrument disconnects the DEVICE UNDER TEST from the supply and the voltage at the supply connections starts to fall. Disconnection moment is always at peak voltage.
- **Phase 3** After the voltage drops below the limit value the timer is stopped.

Test circuit (Output = Socket)

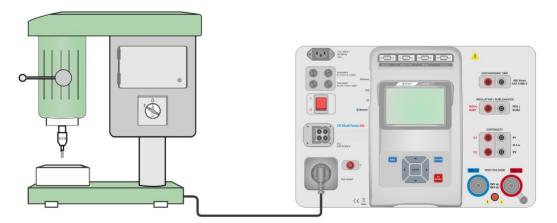

Figure 6.64: Discharging Time test (Output = Socket)

Discharging Time test procedure (Output = Socket)

- Select the **Discharging Time** function.
- Set test parameters / limits.
- Connect the device under test to the mains test socket on the instrument.
- Start measurement.
- Measurement can be stopped manually or automatically.
- Save results (optional).

Test parameters (optional)

For the optional Power measurement test the parameters and limits are the same as set in the Power single test, see chapter 6.2.12 Power.

Test circuit

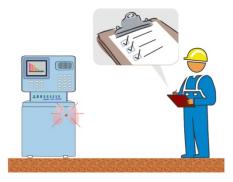

Figure 6.67: Functional inspection

Functional inspection procedure

- Select the appropriate Functional inspection.
- Start the inspection.
- Perform the functional inspection of the appliance / equipment.
- > Perform the Power measurement test through the mains test socket (optional).
- Apply appropriate ticker(s) to items of inspection.
- End the inspection.
- Save results (optional).

Figure 6.68: Examples of Functional Inspection results

7 Auto Sequences[®]

Preprogrammed sequences of measurements can be carried out in Auto Sequences® menu. The sequence of measurements, their parameters and flow of the sequence can be programmed. The results of an Auto Sequence[®] can be stored in the memory together with all related information. Auto Sequences[®] can be pre-programmed on PC with the MT Link software and uploaded to the instrument. On the instrument parameters and limits of individual single test in the Auto Sequence® can be changed / set.

7.1 Selection of Auto Sequences®

Required Auto Sequence[®] group from Auto Sequence[®] groups menu should be selected first. Refer to Chapter 4.9 Auto Sequence[®] groups for more details. Auto Sequence[®] to be carried out can then be selected from the Main Auto Sequences[®] menu, which can be organized

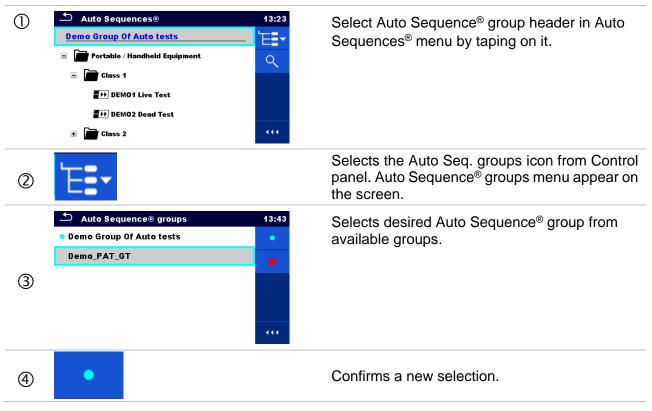

in structural manner with folders and sub-folders containing Auto Sequences®.

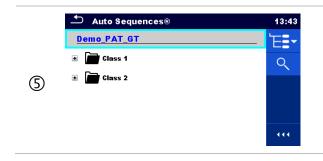

Searching by name or short code is also possible within the active Auto Sequence® group. Refer to Chapter 7.1.2 Searching in Auto Sequences® menu for details.

7.1.1 Selecting an active Auto Sequence[®] group in Auto Sequences[®] menu

Auto Sequences[®] and Auto Sequence[®] group menus are interconnected so an active Auto Sequence[®] group can be also selected in the Auto Sequences® menu.

Procedure

New Auto Sequence[®] group is selected and all folders, sub-folders and Auto Sequences[®] within that group are displayed on the screen.

7.1.2 Searching in Auto Sequences® menu

In Auto Sequence[®] menu it is possible to search for Auto Sequences[®] on base of their Name or Short code.

Procedure Auto Sequences® Select Auto Sequence[®] group header in Auto 13:23 (1)Sequences® menu by taping on it. Demo Group Of Auto tests E Portable / Handheld Equipment Q Class 1 DEM01 Live Test DEMO2 Dead Test 🗉 📄 Class 2 Select Search from options menu to open Search setup 2 menu. Search 14:05 The parameters that can be searched for are displayed 3 in the Search setup menu. Q Short code The search can be narrowed by entering a text in the 3a Name Name and Short code fields. Short code Strings can be entered by using the on-screen 14:05 keyboard. ŵ à S D G Ĥ J Ř shift z x C ý É. Ň Ň end Clears all filters. Sets filters to default value. 3b

Q

Searches through the active Auto Sequence $^{\ensuremath{\mathbb{R}}}$ group according to the set filters.

The results are shown in the Search results screen presented on *Figure 7.1 and Figure 7.2*.

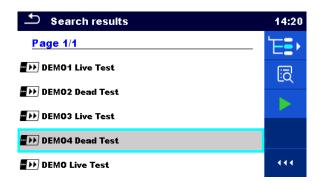

Options

Note:

Search result page consist of up to 50 results.

Options

7.1.3 Structure organization of Auto Sequence[®] group

The Auto Sequences[®] to be carried out can be selected from the active group in Main Auto Sequences[®] menu. This menu can be organized in a structural manner with folders, sub-folders and Auto Sequences[®]. Auto Sequence[®] in the structure can be the original Auto Sequence[®] or a shortcut to the original Auto Sequence[®].

Auto Sequences[®] marked as shortcuts and the original auto Sequences[®] are coupled. Changing of parameters or limits in any of the coupled Auto Sequences[®] will influence on the original Auto Sequence[®] and all its shortcuts.

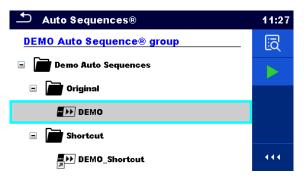

Figure 7.3: Structure organization of Auto Sequence[®] group, Auto Sequence[®] selected

Options

DEMO	The original Auto Sequence [®] .
DEMO_Shortcut	A shortcut to the original Auto Sequence [®] .
iq	Enters menu for more detail view of selected Auto Sequence [®] . This option should also be used if the parameters / limits of the selected Auto Sequence [®] have to be changed. Refer to chapter <i>7.2.1 Auto Sequence[®] view</i> menu for more information.
	Starts the selected Auto Sequence [®] . The instrument immediately starts the Auto Sequence [®] .

7.2 Organization of Auto Sequence[®] tests

An Auto Sequence® test is divided into three phases:

- Before starting the first test the Auto Sequence[®] view menu is shown (unless it was started directly from the Main Auto Sequence[®] menu). Parameters and limits of individual measurements can be set in this menu.
- During the execution phase of an Auto Sequence[®], pre-programmed single tests are carried out. The sequence of single tests is controlled by pre-programmed flow commands.
- After the test sequence is finished the Auto Sequence[®] result menu is shown. Details of individual tests can be viewed and the results can be saved to Memory organizer.

7.2.1 Auto Sequence® view menu

In the Auto Sequence[®] view menu the header and the single tests of selected Auto Sequence[®] are displayed. The header contains Name, Short code (if set) and description of the Auto Sequence[®]. Before starting the Auto Sequence[®], test parameters / limits of individual measurements can be changed.

7.2.1.1 Auto Sequence[®] view menu (header is selected)

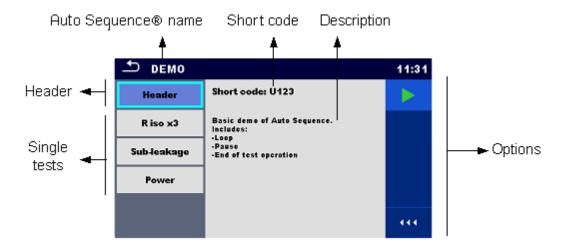

Figure 7.4: Auto Sequence® view menu – header selected

Options

Starts the Auto Sequence®.

7.2.1.2 Auto Sequence[®] view menu (measurement is selected)

	Starts the selected Auto Sequence [®] .
?	Opens the Help menu of selected test.
	Selects Multiple points.
Multiple points	

7.2.1.3 Indication of Loops

The attached 'x3' at the end of single test name indicates that a loop of single tests is programmed. This means that the marked single test will be carried out as many times as the number behind the 'x' indicates. It is possible to exit the loop before, at the end of each individual measurement.

7.2.1.4 Managing multiple points

If the device under test has more than one test point for an individual single test and the selected Auto Sequence® predicts only one test point (one single test) it is possible to change the Auto Sequence® appropriately. Single tests with enabled Multiple points ticker will be executed in a continuous loop. It is possible to exit the loop anytime at the end of each individual measurement.

The Multiple points setting is valid only for the actual Auto Sequence[®]. If the user often tests appliances with more than one test points it is recommended to program a special Auto Sequence[®] with pre-programmed loops.

7.2.2 Step by step excecution of Auto Sequences®

While the Auto Sequence[®] is running it is controlled by pre-programmed flow commands. Examples of actions controlled by flow commands are:

- pauses during the test sequence
- monitoring of input pins
- control of lamps, test adapters and other external devices
- proceeding of test sequence in regard to measured results
- etc.

The actual list of flow commands is available on chapter **E.5 Description of flow commands**.

♪ Demo	17:50
Subleakage test. Test will continue in 1 s.	
rest will continue in 1 s.	

Figure 7.6: Auto Sequence[®] – example of a pause with message

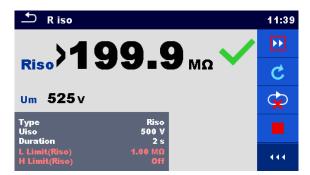

Figure 7.7: Auto Sequence[®] – example of a finished measurement with options for proceeding

Options (during execution of an Auto Sequence®)

	Proceeds to next step in the test sequence. Repeats the measurement if multiple points execution is selected. Displayed result of a single test will be stored.
C	Repeats the measurement. Displayed result of a single test will not be stored.
	Ends the Auto test and goes to Auto test result screen. Refer to chapter 7.2.3 Auto Sequence [®] result screen for more information.
Ŷ	Exits the loop of single tests (pre-programmed loop or multiple points execution) and proceeds to the next step in the test sequence.
	Opens menu for viewing parameters and limits of a current measurement.
Type Riso Uiso 100 V Duration 2 s L Limit(Riso) 10.0 M0 L Limit(Riso-S) Off H Limit(Riso-S) Off	
	Adds comment. The instrument opens keypad for entering a comment to a current measurement.

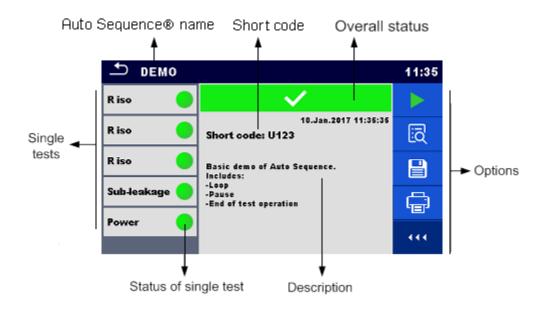

The offered options in the control panel depend on the selected single test, its result and the programmed test flow.

Note:

 During Auto Sequence[®] the popup Warning messages (see chapter 4.4 Symbols and messages) are displayed only before the single test inside one Auto Sequence[®]. This default setting can be changed with appropriate flow command. For more information about programming Auto Sequences[®] refer to chapter Appendix E -Programming of Auto Sequences[®] on MT Link.

7.2.3 Auto Sequence® result screen

After the Auto Sequence[®] is finished the Auto Sequence[®] result screen is displayed as presented on *Figure 7.8*. At the left side of the display the single tests and their statuses are shown. In the middle of the display the header of the Auto Sequence[®] is displayed and at the top the overall Auto Sequence[®] status is displayed. Refer to chapter *5.1.1 Measurement statuses* for more information.

Options

Options	
	Start Test Starts a new Auto Sequence [®] .
	View results of individual measurements. The instrument goes to menu for viewing details of the Auto Sequence [®] , see <i>Figure 7.9</i> .
F	Adds comment to the Auto Sequence [®] . The instrument opens keypad for entering a comment.
	Saves the Auto Sequence [®] results.
	A new Auto Sequence [®] was selected and started from a Structure object in the structure tree:
	 The Auto Sequence[®] will be saved under the selected Structure object.
	A new Auto Sequence [®] was started from the Auto Sequence [®] main menu:
	 Saving under the last selected Structure object will be offered by default. The user can select another Structure object or create a new Structure object. By pressing organizer menu the Auto Sequence[®] is saved under selected location.
	An empty measurement was selected in structure tree and started:
	 The result(s) will be added to the Auto Sequence[®]. The Auto Sequence[®] will change its overall status from 'empty' to 'finished'.
	An already carried out Auto Sequence® was selected in structure tree, viewed and then restarted:
	 A new Auto Sequence[®] will be saved under the selected Structure object.
	Print label.
لي	See chapter 4.6.9 Devices for details how to enable and set the printer. For more information refer to chapter Appendix C - Print labels and write / read RFID / NFC tags.
	Print and Save Auto Sequence® results simultaneously. Option is available if Devices parameter Auto save is set to On print, se chapter 4.6.9 Devices for more information.
é	Write RFID/NFC tag. Refer to Appendix C - Print labels and write / read RFID / NFC tags for supported tag types.

Write RFID / NFC tag and Save Auto Sequence® results simultaneously. Option is available if Devices parameter Auto save is set to On write, see chapter *4.6.9 Devices* for more information.

Note:

Options menu content depends on Devices settings menu. If no writing device is set, than 'Print label' and 'Write RFID' icons are hidden. Only one writing device can be set at the same time.

Options (menu for viewing details of Auto Sequence[®] results):

ī	Details of selected single test in Auto Sequence [®] are displayed, see <i>Figure 7.9.</i>
	Adds comment to the selected single test in Auto Sequence [®] . The instrument opens keypad for entering a comment.
	View parameters and limits of selected single test.

Options menu content depends on Devices settings menu. If no writing device is set, than 'Print label' and 'Write RFID' icons are hidden. Only one writing device can be set at the same time.

8 Maintenance

8.1 Periodic calibration

It is essential that all measuring instruments are regularly calibrated in order for the technical specification listed in this manual to be guaranteed. We recommend an annual calibration.

8.2 Fuses

There are four fuses on the front panel:

F1, F2: F 5 A / 250 V / (20×5) mm / 1500 A: intended for instrument protection. For position of fuses refer to chapter 3.1 Front panel.

F3, F4: T 16 A / 250 V / $(32 \times 6,3)$ mm / 1500 A: protection against over-currents through mains test socket. For position of fuses refer to chapter 3.1 Front panel.

Warnings!

- Switch off the instrument and disconnect all test accessories and mains cord before replacing the fuses or opening the instrument.
- Replace blown fuses only with the same types defined in this document.

8.3 Service

For repairs under or out of warranty please contact your distributor for further information.

Unauthorized person is not allowed to open the C.A 6165 instrument. There are no user replaceable parts inside the instrument.

8.4 Cleaning

Use a soft, slightly moistened cloth with soap water or alcohol to clean the surface of C.A 6165 instrument. Leave the instrument to dry totally before using it.

Notes:

- Do not use liquids based on petrol or hydrocarbons!
- Do not spill cleaning liquid over the instrument!

9.1 USB and RS232 communication with PC

The instrument automatically selects the communication mode according to detected interface. USB interface has priority.

How to establish an USB or RS-232 link:

•	RS-232 communication: connect a PC COM port to the instrument RS232-2 connector using the RS232 serial communication cable;
•	USB communication: connect a PC USB port to the instrument USB connector using the USB interface cable.
•	Switch on the PC and the instrument.
•	Run the MT Link software.
•	Select communication port.
•	The PC and the instrument will automatically recognize each other.
•	The instrument is prepared to communicate with the PC.

MT Linkis a PC software running on Windows 7, Windows 8, Windows 8.1 and Windows 10.

9.2 Bluetooth communication

The internal Bluetooth module enables easy communication via Bluetooth with PC and Android devices.

How to configure a Bluetooth link between instrument and PC

•	On PC configure a Standard Serial Port to enable communication over Bluetooth link between instrumen
	and PC. Usually no code for pairing the devices is needed.
•	Run the MT Link software.
•	Select configured communication port.
•	The PC and the instrument will automatically recognize each other.
•	The instrument is prepared to communicate with the PC.

Switch On the instrument. Some Android applications automatically carry out the setup of a Bluetooth connection. It is preferred to use this option if it exists. This option is supported by Chauvin Arnoux's Android applications.

 If this option is not supported by the selected Android application then configure a Bluetooth link via Android device's Bluetooth configuration tool. Usually no code for pairing the devices is needed.
 The instrument and Android device are ready to communicate.

Notes

- Sometimes there will be a demand from the PC or Android device to enter the code. Enter code 'NNNN' to correctly configure the Bluetooth link.
- The name of correctly configured Bluetooth device must consist of the instrument type plus serial number, eg. CA 6165-12240429I. If the Bluetooth module got another name, the configuration must be repeated.
- In case of serious troubles with the Bluetooth communication it is possible to reinitialize the internal Bluetooth module. The initialization is carried out during the Initial settings procedure. In case of a successful initialization "INITIALIZING... OK!" is displayed at the end of the procedure. See chapter 4.6.10 Initial Settings.
- Check if there are available Chauvin Arnoux Android applications for this instrument.

9.3 Bluetooth communication with printers and scanners

The C.A 6165 instrument can communicate with supported Bluetooth printers and scanners. Contact Chauvin Arnoux or your distributor which external devices and functionalities are supported. See Chapter *4.6.9 Devices* for details how to set the external Bluetooth devices.

9.4 Ethernet communication

The instrument is also capable of communicating through an Ethernet port. The Ethernet communication must be fully configured in the setting menu before first use. See chapter *4.6.8 Settings* for details. MT Linkis currently **not** supporting Ethernet communication. Contact Chauvin Arnoux or your distributor regarding options for using the Ethernet communication.

9.5 RS232 communication with other external devices

It is possible to communicate with scanners via the RS232-1 serial port and printers via the RS232-2 serial port. Contact Chauvin Arnoux or your distributor which external devices and functionalities are supported.

9.6 Connections to test adapters

9.6.1 Test connector TC1

The 8 pin test connector TC1 is intended for connection of external test adapters. TC1 consists of Measuring signal connector and Communication signal connector.

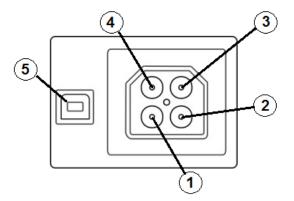

Figure 9.1: Test connector TC1 layout

Legend:

4 pin measuring signal connection (Safety connector)

1	In parallel to terminal N on mains test socket
2	In parallel to terminal L on mains test socket
3	In parallel to terminal PE on mains test socket
4	In parallel to terminal P/S

Appendix A - Structure objects in C.A 6165

Symbol	Default name	Description
>_	Node	Node
Q	Project	Project
9	Location	Location
	Element	Universal element
2	Appliance	Appliance (basic description)
A	Appliance FD	Appliance (full description)
1	Machine	Electrical machine
\$ 8	Switchgear	Switchgear
	Level1	1st sub-level of machine / switchgear
	Level 2	2nd sub-level of machine / switchgear
	Level 3	3rd sub-level of machine / switchgear

Structure elements used in Memory Organizer are instrument's Profile dependent.

Appendix B - Profile Notes

There are no specific profile notes for C.A 6165 .

Appendix C - Print labels and write / read RFID / NFC tags

The instrument supports different printers and two tag formats (PAT and Generic); listed parameters setting is described in chapter 4.6.9 Devices.

Tag content can be presented as text only or arranged as text area and machine-readable code area – QR code – in addition.

The instrument supports RFID / NFC reader / writer device, tag type supported is NTAG216.

Please check with Chauvin Arnoux or distributor which printers and labels are supported in your instrument.

C.1 PAT tag format

It is intended for tagging of individual appliance with Auto Sequence® test data. To start printing, Auto Sequence® should be finished and saved or reopened from memory structure.

Label type is simple, containing text area only, available data are:

- Appliance ID
- Appliance name
- Test date
- Retest date
- Auto Sequence® test status

• User name (who currently performed test or who performed saved test, if printed from memory)

Following table describe tag content arrangement and its data for supported form size and chosen label type.

Label type	Form size W x H (mm)	Tag content arrangement	Label data
Simple	50x25,5	Text	Appliance ID, appliance name, test status, test or retest date, user name

Notes:

- Data not available will not be printed on the label.
- Test or Retest date: it is set in the General Settings => Devices => Writing devices menu.
- If Auto Sequence® was modified, its short code is marked with asterisk (*).

C.2 Generic tag format

It is intended for tagging structure objects which could be tested. In addition to test result data, test object location within structure is marked. Label printing can be started from selected structure object even if no Auto Sequence® is associated with it, or from finished Auto Sequence® saved under it.

Tag data presented in text area are:

- Parent structure object ID (name) (← Object_name)
- Auto Sequence® short test code (if printing from Auto Sequence®; if printing from object field is omitted)
- Object ID (name)
- Test date (|→ DD.MM.YYYY) or Retest date (→| DD.MM.YYYY), which one is selected in General Settings
 => Devices => Writing devices menu
- Status (printing from object: overall status of all tests appended to the object or sub-structure objects; printing from Auto Sequence®: its status)
- User name (Printing from Auto Sequence: user who performed test; printing from object: current signed-in user)

Tag data presented in machine-readable area are:

- Parent structure object ID (name)
- Auto Sequence® short test code (if printing from Auto Sequence®; if printing from object field is omitted)
- Object ID (name)
- Test date
- Test period (from appliance description)
- Auto Sequence® status (field is omitted, if not printing from Auto Sequence®)
- > Object status (overall status of all tests appended to the object or sub-structure objects)
- User name (Printing from Auto Sequence®: user who performed test; printing from object: currently signed-in user)

Following table describes tag content arrangement and its data for supported label form size.

Form size W x H (mm)	Tag content arrangement	Data
	Text	Parent object name, Test code, Object ID, test or retest date, status,
		user
50 x 25.5	QR	Parent object name, Test code, Object ID, test date, test period,
		Auto Sequence® status, Object status, user.

Notes:

- > Data not available will not be printed on the label.
- Object without appended Auto Sequence® test has no status!
- If Auto Sequence® was modified, its short code is marked with asterisk (*).
- Object status depends on all measurements (Auto Sequences® or Single tests) appended to the object or substructure objects, see chapter 5.1.2.1 Measurement status indication under the Structure object for details.

Following table describes data content written on RFID / NFC tag.

RFID / NFC tag type	Data
NTAG216	Parent object name, Test code, Object ID, test date, test period, Auto Sequence® status, Object status, user.

Appendix D - Default list of Auto Sequences®

Pre-programmed DEMO Auto Sequences®

No.	Name	Description
1		This Auto Sequence [®] is just for demonstration of manipulation of Auto Sequence [®] operation.
2	DEMO_2	This Auto Sequence [®] is just for demonstration of manipulation of Auto Sequence [®] operation.

Appendix E - Programming of Auto Sequences[®] on MT Link

The Auto Sequence[®] Editor is a part of the MT Link software. In Auto Sequence[®] Editor, Auto Sequences[®] can be preprogrammed and organized in groups, before uploaded to the instrument.

E.1 Auto Sequence® Editor workspace

	>>>	
To enter Auto Sequence® editor's workspace, select		
Sequence® editor workspace is devided in four main ar		
Sequence [®] is displayed. In the middle part of the works		
shown. On the right side, list of available single tests	and list of flow co	ommands 4 are shown.

Single test area contains three tabs, Measurements Inspections and Custom Inspections tab. Custom Inspections and their tasks are programmed by user.

Figure E.2: Example of an Auto Sequence® header

Figure E.3: Example of a measurement step

Figure E.4: Example of an Auto Sequence® result

E.2 Managing of Auto Sequence[®] groups

The Auto Sequence[®] can be divided into different user defined Auto Sequence[®] groups. Each Auto Sequence[®] group is stored in a file. More files can be opened simultaneously in Auto Sequence[®] editor. Within Auto Sequence[®] Group, tree structure can be organized, with folders / subfolders containing Auto Sequence[®]. The three structure of currently active Auto Sequence[®] Group is displayed on the left side of the Auto Sequence[®] editor workspace, see *Figure E.5.*

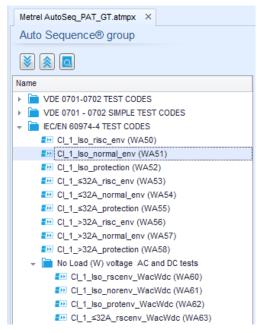

Figure E.5: Auto Sequence[®] Group tree organization

Operation options on Files and Auto Sequence[®] Group are available from menu bar at the top of Auto Sequence[®] editor workspace.

File operation options:

	Opens a file (Auto Sequence [®] Group).
	Creates a new file (Auto Sequence [®] Group).
-	Saves / Saves as the opened Auto Sequence [®] Group to a file.
\bigotimes	Closes the file (Auto Sequence [®] Group).

Group of Auto Sequences® view options:

>	Expand all folders / subfolders / Auto Sequences [®] .
	Collapse all folders / subfolders / Auto Sequences [®] .
Q	Toggle between Search by name within Auto Sequence® group and normal view. See chapter <i>E.2.2 Search within selected Auto Sequence</i> [®] group for details.

Auto Sequence[®] Group operation options (also available by right clicking on Folder or Auto Sequence[®]):

	Adds a new folder / subfolder to the group.	
	Adds a new Auto Sequence [®] to the group.	
×	Deletes: - the selected Auto Sequence [®] - the selected folder with all subfolders and Auto Sequences [®]	

Right click on the selected Auto Sequence® or Folder opens menu with additional possibilities:

Ø	Auto Sequence [®] : Edit Name, Description and Image (see <i>Figure E.6</i>). Folder: Edit folder name
	Auto Sequence [®] : Copy to clipboard
	Folder: Copy to clipboard including subfolders and Auto Sequences®
cila.	Auto Sequence [®] : Paste it to selected location
	Folder: Paste it to selected location
2	Auto Sequence®: Create shortcut to selected Auto Sequence®

Double click on the object name allows it name edit:

DOUBLE CLICK	Auto Sequence [®] name: Edit Auto Sequence [®] name
	Folder name: Edit folder name
	Portable / Handheld Equipment

Drag and drop of the selected Auto Sequence[®] or Folder / Subfolder moves it to a new location:

DRAG & DROP	"Drag and drop" functionality is equivalent to "cut" and "paste" in a single move.
-------------	--

E.2.1 Auto Sequence[®] Name, Description and Image editing

When EDIT function is selected on Auto Sequence[®], menu for editing presented on *Figure E.6* appear on the screen. Editing options are:

Name: Edit or change the name of Auto Sequence®.

Description: Any text for additional description of Auto Sequence[®] can be entered.

Image: Image presenting Auto Sequence® measuring arrangement can be entered or deleted.

P	Enters menu for browsing to Image location.
x	Deletes the Image from Auto Sequence®.

Name	DEMO1 Live Test	
Description	Mains voltage is applied on DUT	-
		Ŧ
Image	P Class 1 Equipment.bmp	×
	ОК Са	ancel

Figure E.6: Editing the Auto Sequence® Name, Description and Image

E.2.2 Search within selected Auto Sequence[®] group

When subscription is selected, Search menu as presented on *Figure E.7* appear on the screen. By entering the text into search box, found results are automatically highlighted with yellow background. Search functionality is implemented in Folders, Subfolders and Auto Sequences[®] of selected Auto Sequences[®] Group. Search functionality is case sensitive. Search text can be cleared by selecting the Clear button.

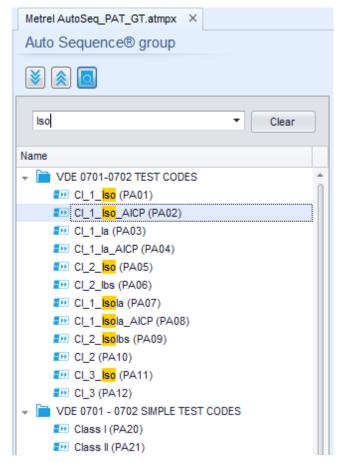

Figure E.7: Example of Search result within Auto Sequence® group

E.3 Elements of an Auto Sequence®

E.3.1 Auto Sequence[®] steps

There are three kinds of Auto Sequence® steps.

Header

The Header step is empty by default. Flow commands can be added to the Header step.

Measurement step

The Measurement step contains a Single test and the Operation after end of test flow command by default. Other Flow commands can also be added to the Measurement step.

Result

The Result step contains the Result screen flow command by default. Other Flow commands can also be added to the Result step.

E.3.2 Single tests

Single tests are the same as in MT LinkMeasurement menu. Limits and parameters of the measurements can be set. Results and sub-results can't be set.

E.3.3 Flow commands

Flow commands are used to control the flow of measurements. Refer to chapter *E.5 Description of flow commands* for more information.

E.3.4 Number of measurement steps

Often the same measurement step has to be performed on multiple points on the device under test. It is possible to set how many times a Measurement step will be repeated. All carried out individual Single test results are stored in the Auto Sequence[®] result as if they were programmed as independent measuring steps.

E.4 Creating / modifying an Auto Sequence®

If creating a new Auto Sequence[®] from scratch, the first step (Header) and the last step (Result) are offered by default. Measurement steps are inserted by the user.

Options:

Adding a measurement step	By double clicking on a Single test a new measurement step will appear as the last of measurement steps. It can also be dragged and dropped on the appropriate position in the Auto Sequence [®] .
Adding flow commands	Selected flow command can be dragged from the list of Flow commands and dropped on the appropriate place in any Auto Sequence [®] step.
Changing position of flow command within measurement step	By a click on an element and use of 🦲 , 🕐 keys.
Viewing / changing parameters of flow commands or single tests.	By a double click on the element.
Setting number of measurement step repetitions	By setting a number in the field.
	Note:
	Up to 999 step repetitions can be set.
1	

Right click on the selected measurement step / flow command:

		Copy – Paste before
3	Сору	A measurement step / flow command can be copied and pasted above selected location on the same or on another Auto Sequence [®] .
	Paste before	Copy – Paste after
	Paste after	A measurement step / flow command can be copied and pasted under selected location on the same or on another Auto Sequence [®] .
TEST	Delete	
-		Delete
		Deletes the selected measurement step / flow command.

E.5 Description of flow commands

Double click on inserted Flow Command opens menu window, where text or picture can be entered, external signalling and external commands can be activated and parameters can be set.

Flow commands Operation after end of test and Results screen are entered by default, others are user selectable from Flow Commands menu.

Pause

A Pause command with text message or picture can be inserted anywhere in the measuring steps. Warning icon can be set alone or added to text message. Arbitrary text message can be entered in prepared field Text of menu window.

Parameters:

Pause type	Show text and/or warning (Check to show warning icon) Show picture (P browse for image path)
Duration	Number in seconds, infinite (no entry)

Output state

Sets outputs OUT_1, OUT_2, OUT_3, and OUT_4 on OUTPUT port. Following settings of this command are ignored:

• OUT_1 and OUT_2 while Lamps HV mode is enabled.

OUT_3 and OUT_4 while Lamps Pass / Fail mode is enabled.

All outputs are single normally opened relay contacts if not checked in Menu Output pins window.

Parameters:

OUT_1	Set closed relay contact between OUTPUT pins 4 and 9		
OUT_2	Set closed relay contact between OUTPUT pins 3 and 8		
VUT_3	Set closed relay contact between OUTPUT pins 2 and 7		
OUT_4	Set closed relay contact between OUTPUT pins 1 and 6		
OUT_5			
OUT_6			
OUT_7	Applicable only when using CE Adapter A 1460		
OUT_8			

Wait input mode

Reads input condition on pins IN_2, IN_3, IN_4 and IN_5 on INPUT port. Input must be high to proceed with the Auto Sequence[®].

Parameters

State	On – enables Wait input mode; set active INPUT from Input pins menu Off – disables Wait input mode		
IN_2	IN_2 reading condition on INPUT pin 6 is active		
🗹 IN_3	IN_3 reading condition on INPUT pin 7 is active		
✓ IN_4	IN_4 reading condition on INPUT pin 8 is active		
IN_5	IN_5 reading condition on INPUT pin 4 is active		

Lamps HV mode

Drives external lamps through OUT_1 and OUT_2 outputs. Works only in HV & HV programmable functions.

- Red lamp (OUT_1) ON means that the instrument is ready for HV test. Red lamp turns on before first flow command in step that contains HV test. Red lamp turns off after end of the HV test.
- Green lamp (OUT_2) blinking means that high voltage will be applied to WITHSTANDING (HV(~+) and HV(~)) test terminals as soon as all input conditions will be fulfilled.
- Green lamp (OUT_2) ON means that dangerous voltage is present at WITHSTANDING (HV(~+) and HV(~-)) test terminals. Green lamp turns on before the measurement and turns off after the measurement.

While Lamps HV mode command is enabled the settings of Drive output command for OUT_1 and OUT_2 is ignored.

Parameters

State	On – enables Lamps HV mode	
	Off – disables Lamps HV mode	

Lamps Pass / Fail mode

Drives external lamps through OUT_3 and OUT_4 outputs.

During measurement the lights reflect status icon in single test.

After measurement

- Blue lamp (OUT_3) lights ON when test has passed. Lamp is lit until next step is started.
- Yellow lamp (OUT_4) lights ON when test has failed. Lamp is lit until next step is started.
- Lights turn off at the beginning of next step.

While Lamps Pass / Fail mode command is enabled the settings of Drive output command for OUT_3 and OUT_4 is ignored.

Parameters

State	On – enables Lamps Pass / Fail mode	
	Off – disables Lamps Pass / Fail mode	

Buzzer mode

Passed or failed measurement is indicated with beeps.

- Pass double beep after the test
- Fail long beep after the test

Beep happens right after single test measurement.

Parameters

State	On – enables Buzzer mode
	Off – disables Buzzer mode

External TEST / OK key mode

Instrument enables external TEST / OK key (OK / ENTER / TEST / HV TEST) by activating INPUT pin 5 reading condition. Functionality of the EXTERNAL OK KEY mode is the same as of the OK / ENTER / TEST / HV TEST key.

Parameters

State	On – enables External TEST / OK key mode (INPUT pin 5 is active)
	Off – disables External TEST / OK key mode

No notifications mode

Instrument skips pre-test warnings (see C.A 6165 User Manual, chapter 4.4 Symbols and messages for more information).

Parameters

State	On – enables No notifications mode
	Off – disables No notifications mode

Appliance info

Instrument enables to automatically add the appliance name to the Auto Sequence®.

Parameters

Repeat Setting	Repeat:	The same Appliance ID will be offered each time if the same Auto Sequence [®] is carried out successively in a loop.		
	Increment:	A four digit number will be added to the Appliance ID and incremented each time if the same Auto Sequence [®] is carried out successively in a loop.		
Appliance type	Selects the type	Selects the type of the appliance (Appliance, Appliance_FD)		
Default Appliance ID	Enter default Ap	Enter default Appliance ID		
Appliance name	Enter Appliance name.			
	Options:			
	 Editable – allows Appliance name to be modified while running Auto Sequence Menu with a list of Appliance names and possibility to enter custom Appliance name offered within the test. Not editable – Default Appliance name is used. Appliance name cannot be modified while running Auto Sequence®. 			
Retest period	Retest period in months.			
	Options:			
	Editable – allows Retest period to be modified while running Auto Sequen Numeric keypad for entering custom Retest period is offered within the test.			
	Not editable – Default Retest period is used. Retest period cannot be modified wh running Auto Sequence®.			

Note

• This flow command is active only if Auto Sequence[®] is started from the Auto Sequences[®] Main menu.

Inspection Expert mode

If Inspection Epert mode flow command is set, the Visual inspection screen and Functional inspection screen within Auto Sequence[®] are displayed for 1 second and an overall PASS is automatically applied at the end of test. In between, the automatic procedure can be stopped and statuses can be applied manually.

Inspection Expert mode is disabled by default.

Parameters

State	On – enables automatic settings of tickers in Visual and Functual tests.
	Off – disables automatic settings of tickers in Visual and Functional tests.

Flow Protocol

This flow command controls commands for communication with external device for the control of the flow of Auto Sequence[®].

Parameters

Communication settings	Selects the port for communication with the external device. - RS232(PC) - USB		
Flow settings	Commands for comm (industrial PC for example	nunication with external device mple)	
	Proceed	Send string: Proceed	
		Description: If Proceed Flow setting is enabled, implementation of Auto Sequence [®] on instrument can be automatically controlled by external device by using Proceed string command. Command works in parallel with OK / ENTER / TEST / HV TEST keys and the EXTERNAL TEST / OK key mode. Proceed Flow setting is disabled by default.	
	End + Status	Recived strings: End - pass End - fail End - none End - empty	
		Description: Instrument sends string to external device at the end of each Measurement step. End + Status Flow setting is disabled by default.	
	Alarm	Recived string: Alarm	
		Description: Instrument sends "Alarm" string to external device if "empty" status is detected and if both conditions -"Fail" status at the end of measurement step and flow command OPERATION AFTER END OF TEST – fail is set to "manual". Alarm Flow setting is disabled by default.	

Operation after end of test This flow command controls the proceeding of the Auto Sequence[®] in regard to the measurement results.

Parameters

Operation after end of test – pass	The operation can be individually set for the case the measurement passed, failed or ended without a status.	
– fail – no status	Manual:	The test sequence stops and waits for apropriate command (TEST key, external command) to proceed.
	Auto:	The test sequence automatically proceeds.

Result screen

This flow command controls the proceeding after the Auto Sequence® has ended.

Parameters

Auto Save	Auto Sequence [®] results are stored in the momentary workspace. A new Node with the month and year will be created. Under the Node Auto Sequence [®] results or (if Appliance info flow command is set) a new appliance and Auto Sequence [®] results will be stored.
	Up to 100 Auto Sequence [®] results or appliances can be automatically stored under the same node. If more results / appliances are available, they are split to multiple nodes.
	Local Save Flow setting is disabled by default.
Auto Print	Auto Sequence® results are automatically printed.

Notes

This flow command is active only if Auto Sequence[®] is started from the Auto Sequences[®] Main menu (not from Memory organizer).

E.6 Custom Inspections programming

Arbitrary set of tasks dedicated to specific user defined Inspections can be programmed with application of Custom Inspection Editor Tool, accessible from Auto Sequence® Editor workspace. Custom Inspections are stored in dedicated file *.indf with user defined name. For application of Custom Inspections as a single test within Auto Sequence® group, appropriate file containing specific Custom Inspection should be opened first.

E.6.1 Creating and editing Custom Inspections

1

2

Custom Inspection Editor workspace is entered by selecting <u>Custom Inspection Editor</u> icon from Auto Sequences® main menu. It is divided in two main areas, as presented on *Figure E.8: Custom Inspection Editor workscpace*.

Figure E.8: Custom Inspection Editor workscpace

Custom Inspection Editor Main menu options:

	Opens existing Custom Inspection Data file. By selecting, menu for browsing to location of *.indf file containing one or more Custom Inspections data appear on the screen. Selected file is opened in dedicated tab marked with file name.
	Creates a new Custom Inspection Data file. New tab with empty workspace is opened. Default name of the new tab is <i>Inspection Data File</i> ; it could be renamed during Save procedure.
•	Saves / Saves as Custom Inspection Data file opened on active tab. Menu for browsing to the folder location and editing of file name is opened. Browse to the location, confirm overwriting, if file already exists or edit file name to save it as a new Custom Inspection Data file.
	Add New Custom Inspection. New inspection with default name <i>Custom Inspection</i> and default scope <i>Visual</i> appear on the editor workspace. It contains one Item task with default name <i>Custom Inspection</i> and default Type <i>Pass_Fail_Checked_Empty</i> . Default Name and Type can be edited – changed.

Remove selected custom inspection. To select inspection, click to the inspection Name field. To remove it, select icon from editor main menu. Before removal, user is asked to confirm deletion.

E.6.2 Applying Custom Inspections

Custom inspections can be applied in Auto Sequences®. Direct assignment of Custom inspection to the MT Linkstructure objects is not possible.

After custom created Inspection Data file is opened, available inspections are listed in Custom Inspections tab of Single test area of Auto Sequence® Editor, see chapter *E.1 Auto Sequence*® Editor workspace for details. Custom Inspection is added to Auto sequence as a Single test, see chapter *E.4 Creating / modifying an Auto Sequence*® for details.

Opening / changing Inspection Data File

Single test				
Measurement Inspections Custom Inspections	Position cursor within Custom inspections List area and apply mou right click to open Option menu:			
Custom Inspection sample01	S			
Custom Inspection sample02	Refresh: Refresh content of already opened Inspection Data file.			
Custom Inspection sample03	Browse for custom Inspection file:			
Browse for custom inspection file Refresh	Menu for browsing to folder location of new Inspection Data file is opened.			
Measurement Inspections Custom Inspections	After confirmation of selection, new Inspection Data file is opened and list of available Custom Inspections is changed.			
Visual PRCD protected extension cord	Note:			
Functional PRCD protected extension cord Visual Multi-outlet extension cord	 If MT LinkWork scope is changed, opened Inspection Data file 			
Functional Multi-outlet extension cord	remains active and available Custom Inspections remains			
Visual Outdoor extension cord				
Functional Outdoor extension cord	same.
